DETAILED ACTION

Election/Restrictions

Applicant's election without traverse of claims 13-18 in the reply filed on 8/7/2008 is acknowledged.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 13-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Heitmann (U.S Patent No. 5462071).

Regarding claim 13, Heitmann discloses a method for transferring heat between two or more stations of a system for manufacturing tobacco products comprising the steps of:

cooling a manufacturing station (1, fig. 1) by circulating at least one heat exchange fluid procured from a source (pump 9, fig. 1) located externally of the station (see fig. 1);

directing the heat exchange fluid from the cooled manufacturing station (1, fig. 1) to a station for the primary processing (11, fig. 1), in order to heat the primary processing station.

Regarding claims 14-15, Heitmann discloses the step of cooling the manufacturing station includes the step of cooling a plurality of machines (3, 4, 6 of fig. 1) involves cooling all the machines simultaneously (see fig. 1).

Regarding claim 16, Heitmann discloses the step of heating the primary processing station is followed by a step of releasing the heat exchange fluid to an external station (reference sign 8, fig. 1) equivalent to the claimed "external discharge station" of the instant claim 16.

Regarding claim 17, Heitmann discloses the step of cooling the manufacturing station consists in a continuous process accomplished by circulating the heat exchange fluid drawn continuously from the source of supply (column 5, lines 37-60 and see fig. 1).

Regarding claim 18, Heitmann discloses the stop of heating the primary processing station is brought about continuously by directing the heat exchanged fluid into the selfsame station after being heated in the manufacturing station (column 5, lines 37-60 and see fig. 1).
